

Training

We started to offer training because so many customers asked us to impart our skills and capabilities to enhance their in-house teams. We've developed a range of packaged & bespoke courses across a wide range of construction contract & professional engineering related subjects.

All training courses are delivered by experienced Consultants who are skilled tutors.

We use innovative, interesting learning methods to engage delegates. We apply real-life experiences & examples, providing realistic advice you will use regularly to improve your business. In addition to the standard courses listed below we can develop bespoke courses tailored to clients' specific needs. Our consultants regularly deliver a wide range of courses including;

- Standards forms of contract: NEC, JCT
- All forms of NEC4 and NEC3 contracts including ECC, PSC, TSC, ECS, ECSC, FC
- Consultancy contracts
- Introduction to contract law
- Dispute resolution - Adjudication
- PFI contracts & commercial practice

Courses are delivered to clients either at their own premises or at venues arranged by us.
